

Site Screen Breakdown

Objective:

The pie chart here shows the screen rate breakdown for all the sites at portfolio level by default.

Navigation:

Interpretation

The pie charts provide the following information:

- The pie chart shows the distribution of screen rate breakdown, the sites are divided into 4 categories (High-performers, Medium-performers, Low-performers and Non-performers).
- Hovering mouse over the slice shows the number of sites for that category along with the percentage.

Any filter condition applied on the protocol grid will reflect changes in the pie-chart. It will then only display data for the protocol that are present in the protocol grid.
